### FUTURE- AND AUDIT-PROOF ARCHIVING

Enormous amounts of data, strict compliance requirements, cost pressure and a lack of specialists dominate the image of IT departments in the healthcare sector. Flexible, future-proof and cost-efficient solutions are required to store patient data for the long term and bring it safely into the future.

DATA INTEGRITY PROTECTION

MAXIMUM SCALABILITY

LOW TCO

EASY DATA MIGRATIONS

## SCALABLE, EASY TO USE & COST-EFFICIENT WITH ITERNITY

Audit-proof archiving independent of the storage hardware

Universal archive for 120+ validated applications (PACS, HIS, ECM, DMS, ERP)

Support of DAS-, NAS-, SAN-, Object and Cloud Storage targets

Easy and secure data migrations

Data integrity protection, encryption and automatic self-healing

Compliance with legal regulations; audited and certified by KPMG

Cost savings of over 50% compared to the public cloud and proprietary systems

Strong partnerships and purchase via the global HPE price list possible

## INVESTMENT PROTECTION WITH SOFTWARE-DEFINED ARCHIVING

Software-defined solutions from iTernity separate the archiving intelligence from the hardware, protect IT investments in the long term and turn archiving future-proof

iTernity solutions protect data from PACS, EHR, ERP and ECM systems against manipulation, loss, deletion or modification. We help you fulfill complex compliance requirements, manage data growth and reduce your overall costs (TCO).

- iCAS is a middleware for retention management and WORM storage. The software integrates perfectly into your existing IT infrastructure and complements it to ensure compliance, data integrity and long-term availability.
- iCAS FS is a scale-out archiving platform and ensures future-proof data storage and compliance at low TCO. Thanks to the zero-touch operation and the integrated monitoring your IT has no effort with the archive system.

*„It was particularly important for us that all existing and future applications and departments can access and work with the central archive. ICAS has convinced us in practical use over the past ten years and has developed from a PACS archive to a central pillar of our IT infrastructure thanks to its versatility.“*

Robert Hasenstab, Head of IT  
**Goethe University Hospital Frankfurt**

Further case studies from over 1,200 archiving projects can be found at [www.iTernity.com/downloads](http://www.iTernity.com/downloads).
